

Where the water comes from:

- The public network provides mains water for a few hours per week.
- While mains water is flowing, a pump automatically fills the cistern of your apartment.
- When you turn a tap on, a second pump (an autoclave) automatically activates, forcing water out of the cistern and into the pipes of your apartment.

Tips:

- Mains water is provided at set times on specific days. Please ask us for the schedule.
 - To make sure your cistern does not run out of water, please use the washing machine and any other gadgets that use a lot of water while the mains network is providing water.
-
- Please avoid wasting water in the the shower, or enjoy longer showers while the public network is supplying mains water.

Drinking water:

- You can drink the tap water in Sicily.
- Some people are not keen to drink water which has been sitting in a cistern for days. In some of our apartments there is a direct connection to the mains network. Please feel free to use it to fill up bottles of fresh drinking water when the mains water is running.
- If you do not like tap water at all, every supermarket offers a wide range of mineral waters.
