

What can happen:

- In Sicily, a gentle breeze may become a storm very quickly. Wind speeds can be extremely high.
- Awnings, sun shades and shutters can be ripped off by the wind and become airborne.
- On roof terraces, light items such as plastic chairs or tables are particularly prone to flying away.

What you can do:

- Please roll up awnings and umbrellas, close shutters and secure lightweight items when the wind starts to blow strongly.
- Please always do this when you leave your apartment. Even in good weather (i.e. the normal case in Sicily) a very strong wind can suddenly and unexpectedly start to blow.
